BO-PIGROUP

MACHINING

ABOUT US

The company BO-PI was founded in early 80's, it was born as a small family owned company.

Over the years with the workforce of the owners, the company obtained a great expansion of equipments, staff and technological "know-how".

QUALITY MANAGEMENT SYSTEM CERTIFICATE

The main goal is the quality, pursued with a constant updating of equipments and processing techniques.

The new establishment, situated in Località Vauda at San Benigno Canavese, is equipped of three bridge cranes, a sheet metal stamping department, a welding department, a machining department, laser cutting, bending and testing.

LASER CUTTING

Laser cutting at optical fiber up to 20 mm of iron and 10 mm stainless steel

As well as cutting operations through the most suitable technology to the single product, BO-PI GROUP srl is able to manage the other processing (different from laser cutting) necessary to obtain the finished product: re-profiles, slab milling, bending, drilling etc.

Laser cutting is a technology that allows to obtain edges without smudging, a reduced thermal alteration of the material and working tolerances of the order of +/- 0,1 mm.

WELDING

Manual or automatic wired equipments tig, mig, mag and electrode

Laboratory with many years of experience in the field of welding and of precision mechanics, It performs the certified and seal welding. It performs working to other companies, public entities and privates.

Our staff is composed by certified welders and by manual or automatic wired equipments tig, mig, mag and electrode. The certified welding can be performed for different products and on different supports with the different available methodologies.

BENDING

Bending lengths up to 3000 mm and thicknesses up to 10 mm

The company deals with the bending of different type of metals, using CNC forming presses. The accuracy of the programming and the efficiency of the machine allow to obtain excellent results in any kind of working.

Different type of metals are easily pressed and bent in order of customer needs; and it is this versatility to make the bending one of the most used process by the BO-PI GROUP.

MACHINING

Presses up to 250 tons and hydraulic presses for deep draw manufacturing

Mainly BO-PI performs processing for third parties with machine tools for the leading engineering industries. In particular machining in general as removal chip, stamping, metal processing, plastic processing, are carried out through

very recent technologies present in the company.
